

Purpose of Update

This update will implement changes to labelling as required by ADR 2017, and install a new section of data representing the ADR 2017 substance list. Previous versions will not be deleted - for removal instructions please contact Hibiscus IT support.

Update Executables

Executables for both HibSoft Label Standard and HibSoft Label Enterprise can be downloaded by navigating to the appropriate pages of our IT support website – www.hibiscus.support - or using the links below.

Label Standard	www.hibiscus.support/labelstd/HSLs-ADR2017.exe
Label Enterprise	www.hibiscus.support/labelent/HSLE-ADR2017.exe www.hibiscus.support/labelent/ScriptUpdate_ADR2017.exe

In either case, please contact Hibiscus PLC for a passkey to run the update.

Before updating, **always** backup your software.

Label Enterprise Only:

1. If your current revision number is less than 1749 please upgrade to that version BEFORE running this update. Failure to do so may lead to loss of functionality when you subsequently upgrade.
2. This update needs to be implemented against the server version of the software ONLY - no need to run on individual clients.
3. After running the update executable you must import the script update to complete the upgrade:
 - a) Open AdminEnt.
 - b) Select 'Settings / Update Setting from File' from the menu bar.
 - c) Select 'ScriptUpdate_ADR2017' from the L2S folder (nothing appears to happen, but, if run successfully you should now have an extra tab on the symbols window in DesignerEnt for Packing Symbols).
