

Harmoneus2

Harmoneus2

Chemical Classification Software
(for Labelling and SDS)

HibSoft in partnership with **Lexeus Ltd.**

All suppliers of chemicals are legally required to comply with international regulations on chemical hazard communication. Responsible suppliers will also, of course, wish not only to comply with the basic letter of the law but to do this correctly and completely to ensure the safety of their customers and to present a professional image.

Harmoneus2 is an easy to use advice system based on asking straightforward questions about your product. It bases its assessment purely on the answers received and without making dangerous assumptions and so will always produce an accurate and reliable classification for your product whilst still requiring a minimum of effort.

Harmoneus2 bases its recommendations for a preparation on the specific properties of the preparation itself where that is appropriate. Alternatively, GHS regulations allow you to calculate health and environmental hazard classification for a preparation on the basis of information about its ingredients. The procedures for doing this are complicated and time-consuming but Harmoneus2 does the calculations for you and gives you the correct advice.

Designed to integrate (optionally) with HibSoft Label Enterprise (chemical labelling) and/or HibSoft Prometheus (safety data sheets) Harmoneus 2 advises you on the international classification and labelling requirements for your chemical products, and recommends safety data sheet contents, in accordance with:

GHS – the Globally Harmonised System of Classification and Labelling of Chemicals;

ADR – the European agreement on transport of dangerous goods consistent with the United Nations Recommendations of the Transport of Dangerous Goods, Model Regulations, the International Maritime Dangerous Goods Code (IMDG Code), and the Regulations Concerning the International Carriage of Dangerous Goods by Rail (RID);

REACH – the European regulations on Registration, Evaluation and Authorisation of Chemicals.

Harmoneus2

Main Features

- Set up a database of frequently used ingredients so that you do not need to re-enter information about them each time you begin classification of a new preparation. The ingredients may be single substances but they can also themselves be mixtures.
- Archive classification data to keep a permanent record of how you decided on your classifications (this is a legal requirement).
- Create and save templates with stored answers to many of the questions to reduce the time and effort required when classifying similar products.

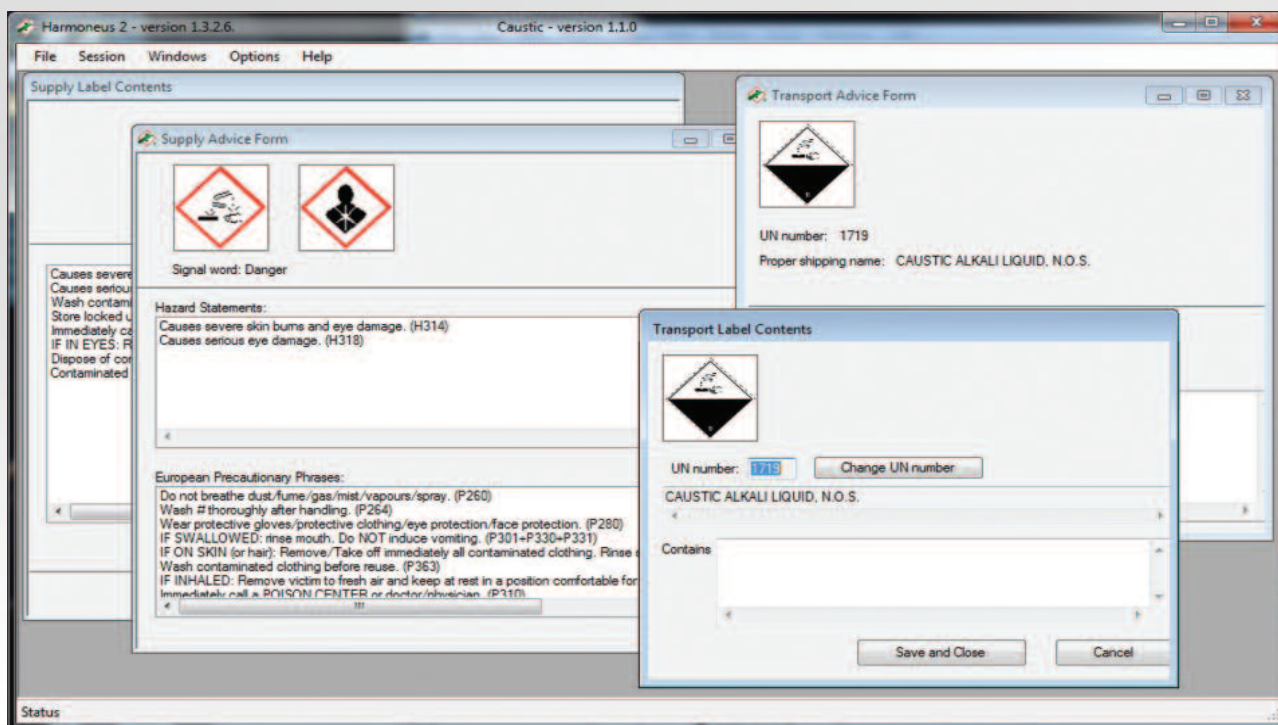

Export recommendations automatically to:

HibSoft Prometheus – to create safety data sheets.

HibSoft Label Enterprise – to print hazardous chemical labels.

Summary of Benefits

- Provides sound professional advice on chemical classification.
- Helps you comply with international regulations on chemical hazard communication.
- Makes it easy to produce a correct classification.
- Provides advice for safety data sheets and for GHS and ADR labelling.
- Saves you time and effort
- Exports data directly to compatible safety data sheet and/or labelling software.
- Maintains a database of ingredients.
- Maintains an archive of classifications.
- Uses templates to reduce input.

Your route to chemical safety compliance:

Harmonous 2 – Correctly classify your products to GHS, ADR, and/or REACH standards.

Prometheus – Create, maintain and distribute properly constructed SDS's

Label Enterprise – Label your products to comply with all international regulations.
